

EMD E7 DIESEL LOCOMOTIVE

HO SCALE

NOW WITH OR WITHOUT SOUND & DCC

PROTO FASTFACTS™

In Service: 1945-early 70s

Variations: Built as cab (A) and cabless booster (B); railroad-specific appliances.

Primary Assignment:

Premier passenger trains, later commuter and some freight work.

In early 1945, EMD unveiled an improved version of the E6, designated the E7. Most of the changes were on the body which sported a new "bulldog" nose, and a large louver behind the cab doors. Introduced just as railroads began upgrading passenger service, the E7 was the most successful passenger diesel ever built, with 428 A units and 82 cabless B units produced for 28 railroads. Only the PRR #5901 was saved and is displayed at the Railroad Museum of Pennsylvania.
