

[illegible]

To properly align service tracks between the Turntable and Walthers Modern Roundhouse (#933-3260) and Add-On Stalls (#933-3261), the structures must be located as follows:

- 1) On the Turntable Mounting Template, small lines along the outside edge of the pit are provided to help align tracks inside Walthers Roundhouse. *NOTE — these lines are 10° apart and match the stall spacing of the Roundhouse. **Additional outdoor service tracks can be installed wherever needed at larger or smaller angles as desired.***
- 2) Carefully measure 1-15/16" (49.2mm) from the edge of the turntable pit to the front edge of the Roundhouse Baseplate (part #1) as shown. *NOTE: If you are using another manufacturer's roundhouse, this distance will have to be adjusted accordingly.*
- 3) Secure the baseplate in position; repeat as needed for additional stalls.
- 4) Test fit your roundhouse service tracks, check for proper alignment and clearances, **BEFORE** securing in place.
