

# HO Structure Kit

## EMD "567" PRIME MOVER

### 933-3119

Thanks for purchasing this Cornerstone Series Kit. Please read all instructions before starting. All parts are molded in styrene plastic. Use glues and paints which are compatible.

From 1938 to 1965, the EMD 567 provided the power to a wide range of first and early second generation diesel locomotives. The "567" designation refers to the displacement in cubic inches per cylinder and the two-cycle diesel was available in numerous sizes and horsepower ratings. Several versions of the V16 depicted by this model were produced over the years and are still going strong today.

The finished model makes a terrific addition to a shop scene and can be further detailed by adding some mechanics and tools, sold separately. With some kitbashing to open the side doors on the hood, it will make a neat interior for an unpowered loco.
