

933-3057

Thanks for purchasing this Cornerstone Series Kit. Please read all instructions before starting. All parts are molded in styrene plastic. Use glues and paints which are compatible.

The local lumberyard became a fixture in cities and towns wherever the tracks ran. To keep the lumber dry and reduce warping or swelling, it was stored under cover, in large sheds built especially for the purpose. When standardized material sizes were adopted, this also allowed for easy sorting.

Today, the small lumberyard has evolved into the building materials center. Railroads still carry much of the bulk lumber shipments, which are usually sent to regional distribution centers, then reloaded on trucks. Carrying everything from studs to kitchen cabinets, some also fabricate components, such as wall sections or roof trusses for local contractors.

For more ideas to detail your scene, ask your dealer, visit our Web-site waltherscornerstone.com or see the latest Walthers HO Scale Model Railroad Reference Book.

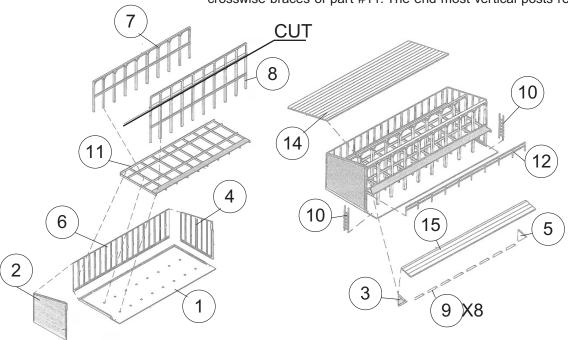

1. Start by gluing windows (29) and doors (28) in their respective places on the walls (23, 24, 25). Next, glue the window "glass" (21,30,31) in place. Glue the four walls (23, 24, 25, 26) together and to the base (33). Make sure the steps line up with the doors. Then, glue the roof (27) on and finish by gluing the chimney (33, 34) together and in place on the roof.

## SEPARATE SHEDS

NOTE: Before proceeding, decide on which version of the shed you wish to model. Then, follow the appropriate instructions.

A. First, cut off the top section of part #8, just above the "V" bracing. After gluing the walls (2, 4, 6) to the base (1), place (do not glue) the horizontal bracing (11) on the base. Now, glue the vertical bracing (7, 8) in place on the base, making sure that they go in front of the crosswise braces of part #11. The end most vertical posts rest on top of the "lip" on the

base and the remaining posts go into the square holes so that they are even with the bottom of the base. Next, slide part #11 up and glue to the bottom of the first crosswise brace on parts # 7 and 8 and on top of the tabs on the back wall. Glue the ladders (10) and railing (12) in place. Then, glue the wall extensions (3, 5) to the top of the side walls (2, 4). Glue the roof pieces (14, 15) in position and complete by the overhang gluing braces (9) in place on part #8 and under roof #15. Repeat procedure for second shed.
