A Note on Availability

At Walthers, we strive to provide you with the widest variety of product possible. In order to achieve this goal, we maintain significant inventory on site. Despite our best efforts to have every item you could possibly need in house at all times, it is not realistically possible to do so. For your convenience, we do our best to promote items that are in stock and to clearly label other items—those that are new and available for Advance Reservations or items that are low in stock and have Limited Quantities Available when the Flyer goes to press. At times, we experience a quick sell out on a particular item or unexpected demand for an item that we believed to have sufficient stock in house. In many cases, items can be back ordered for future delivery. In other cases, we are unable to secure more of a particular item. For the most up to date availability information, we encourage you to visit walthers.com, email us at custserv@walthers.com or call our Customer Service Team at 1-800-4-TRAIN. The ‘Find It’ feature on our website will help you find a Dealer in your area that may still have stock available for the item you desire. Please know that we appreciate your support of both Walthers and your Local Hobby Shop. We are committed to making this Flyer a valuable part of your model railroading.

As computer technology advanced in the 1980s, EMD took a major step forward with the introduction of the new GP60. Directly behind the cab, a trio of onboard microprocessors regulated and ran various systems, replacing complex wiring circuits and relays. Coaxing 3,800 horsepower from its 16-cylinder 710G3A prime mover, the four-axle GP60 was well suited for fast freight service and was often seen on the point of priority trains when new. While the GP60 proved the advantages of computer control, potential buyers were more interested in six-axle power, and EMD focused its development efforts on the bigger units. For now, the GP60 may be the last in a long line of geeps.

Originating in the 1890s to carry wagons, 50’ boxcars were adapted to the needs of shippers early in the 20th century with double-side doors to simplify loading and unloading. In 1942, the Association of American Railroads (AAR) adopted a new standard all-steel design that included the latest pressed steel ends and doors. As the US geared up for WWII, major car builders turned them out in record numbers. The cars proved perfect for big or heavy freight including machinery, appliances, lumber and furniture and were in regular service into the mid-70s on many roads.

**WalthersProto Fastfacts™**

- Limited Edition - One Time Run of These Roadnumbers!
- Great for Late Steam & Diesel-Era Layouts
- Prototypes in Service 1942-75
